## DETAILED ACTION

### *Priority*

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### *Claim Rejections - 35 USC § 112*

2. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

3. Claim 17 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 17, lines 6-7 , " incrementing the phase of the second signal relative to the phase of the second signal" is this correct?

### *Claim Rejections - 35 USC § 102*

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

5. Claims 7, 12, 14, 16 and 17 (as best understood) rejected under 35 U.S.C. 102(b) as being anticipated by Liedberg (US 5,550,514).

The reference by Liedberg, see figure 3 below, shows an electronic PLL clock signal generator circuit, with input node receiving a reference signal from (REF 1), this signal having a phase. The output node being the output of FD(3). A signal generator including (2, 4, 5, 7, 10 and 11) is shown coupled to the input node and generates a first signal phase that varies from the reference (REF) phase by way of variable delay 10, during a first mode of operation, see cols. 4-5, the mode of operation being the periods of activity/inactivity for each delay line. Variable delay 11 allows for the second signal with second phase that varies from the reference phase, by a predetermined phase relationship (see col. 5, lines 1-10), during the other period (when first delay line is inactive, for example.) A signal selector (5) is shown to couple the first or second signals to the output node via (3).

*Allowable Subject Matter*

7. Claims 1-6, 20-23 are allowed.

The examiner could not find fair suggestion for the "the first signal lags the second signal...less than one cycle of the reference signal" and "a phase comparator changing the MUX selection..."

8. Claims 8-11, 13, 15, 18 and 19 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

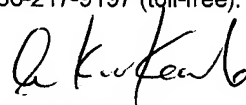

No suggestion for "...increasing a difference between first and reference phases and maintaining a difference between the second and reference phases..." , also no transmitter is shown coupled to the PLL clock. Finally, no suggestion for varying phase of second signal when difference between phases...being less than one period..."
